

Margarita Machine Instructions

Prior to Operating:

IMPORTANT: After transport, allow machine to sit for 1 hour before plugging in!

.. Each ½ gallon container of flavor will make 2-1/2 gallons of mix. Each reservoir tank holds a maximum of 3 gallons of liquid, which will expand to approximately 3.5 gallons as it freezes. Do NOT overfill. If using alcoholic drinks keep in mind that too much alcohol will prevent the mixture from freezing. A 3:1:1 mix of water: flavor: alcohol or a 4:1 mixture of water: flavor is recommended.

To Operate the Margarita Machine:

.. Plug directly into wall socket. Do NOT use extension cords.

.. Time to freeze is between 40-90 minutes depending on the type of mix.

.. To operate press main power switch and agitator switch to ON position. The agitator switch must be to ON position before setting to liquid or slush mode. For slush, press the cooler switch to bottom position (II /).

.. For liquid, press the cooler switch to the up position (I /).

.. Note: the machine is equipped with a time delay relay that provides for a four-minute delay from the time of the initial start. This is to prevent the compressor from short cycling. Once the compressor is ON, the green light will be on.

.. To illuminate the mix tank cover display on top of the unit and the product in the bowl press the display light switch to down position (I /).

Caution: If the machine is stopped after use with ice in the tanks, remove all ice slabs before starting the machine up again.
