

Instructions for Lighting Patio Heaters

1. Install propane cylinder and ensure that gas valve is open.
2. Turn control valve to PILOT position and hold down for 30 seconds to purge air from line.
3. Continue to hold valve down in PILOT position and press igniter several times until pilot is lit. Once lit, (visually check to ensure) continue to hold down control valve in the PILOT position for 1 Minute.
4. Release control valve.
5. If pilot remains lit, turn the control valve to the desired heating level.
6. If pilot does not remain lit, repeat steps 2 – 5.
